HOSPITAL USTER HAS CHOSEN TO RELY ON FUDO PAM BY FUDO SECURITY.

Uster, 15.06.2018

On some of our systems (servers with a wide variety of operating systems), the partners have direct access via VPN to carry out maintenance work, but also to process user error messages or to carry out necessary system updates. Uster hospital wanted to ensure that such access was carried out in compliance with data protection by monitoring the partners' actions at any time and, if necessary, being able to watch them again later - along the lines of a petrol station video surveillance.

Looking for a suitable tool and for evaluating different PAM solutions and trying two different solutions, we decided to trust in Fudo Security's PAM solution. The solution is reliable, easy to implement and was easy to integrate in our own infrastructure. Furthermore it does not require any agents, allows easy operation for users but also administration and convinced us right away due to the required functionality.

Fudo PAM was quickly integrated into our network as a physical appliance. The configuration was carried out by a partner of Fudo Security, who supported us competently and enabled us to operate and support the system ourselves in a short time. Since the beginning of 2018, Uster Hospital has been using this PAM solution successfully and has not regretted the decision to use this product.
